CLIENT ANNOUNCEMENT

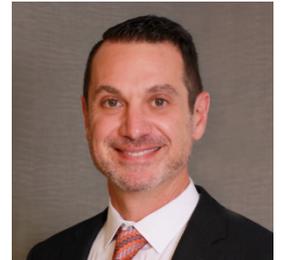

TrackMy Solutions partners with Dr. Joseph Cannova at South Kansas City Surgicenter.

TrackMy Solutions has officially partnered with South Kansas City Surgicenter, to onboard Dr. Joseph Cannova's patients on the TrackMy Implants platform. Through minimally invasive workflows, TrackMy receives patient consented medical implantable device data and tracks this for FDA recalls through TrackMy technology. This partnership is focused on increasing patient safety, liability reduction, and never losing trust between Patient and Surgeon. Patients receive their TrackMy account information, and always have their Electronic Implant ID Card at the click of a button. Should a recall take place, they receive a notification with details on relevant next steps to improve outcomes.

The time is **now** to improve your Medical Device Recall strategy, contact TrackMy Solutions for additional information.

DR. JOSEPH CANNOVA

Dr. Cannova is a board-certified plastic surgeon who provides a full spectrum of plastic surgery services to his Kansas City patients. In 2013 Dr. Cannova was named a Top Doctor in Cosmetic Surgery by 435 South Magazine in a peer-nominated awards process. He's also been named a "Super Doctor" every year since 2007.

SOUTH KANSAS CITY SURGICENTER, LLC (SKCSC)

Is a multi-specialty facility that specializes in surgical and procedural services for adults and children. The facility consists of four operating rooms and one procedure room. We are accredited by American Association of Ambulatory Health Care (AAAHC), licensed by the state of Kansas and Medicaid and Medicare (CMS). We are a current member of the Kansas Association for Ambulatory Surgery Center (KAASC) and the Ambulatory Surgery Center Association (ASCA). <https://www.skcsurgicenter.com/>

TRACKMY SOLUTIONS

TrackMy® Solutions is a web application company centered initially around the healthcare industry using Open API platforms to create better patient facing applications. We focus on the health data elements present in a patient's electronic health record and pull those into our applications using API Integration. We then make this data easily viewable in our application and allow a patient to track their overall health.
