**FOR IMMEDIATE RELEASE: 11/21/19**  
**ANNOUNCEMENT – FROM: TRACKMY SOLUTIONS**

**KANSAS CITY, MO, NOVEMBER 21ST, 2019**

Today - patients, surgeons and healthcare locations are not finding out about implantable medical device recalls in a timely manner. When and if they do, there is no structure in place to immediately notify a patient or Surgeon of this recall and what next steps to take. Through continuing to focus on our Vision of 'Saving A Life', TrackMy Solutions is announcing a partnership with Epic Systems by listing our FHIR application in the Epic AppOrchard to focus on increasing patient safety, and improve outcomes.

Introducing, TrackMy® Implants FHIR Integration with Epic Systems - a Software-as-a-Service product that places clinicians ahead of the game should a medical device recall take place. This product integrates with Epic clinical documentation. With this integration, unique device information is sent to a patient's TrackMy account (post patient captured consent) allowing for ongoing recall management. Through connections with the OpenFDA, TrackMy continues to monitor a patient's medical devices for recalls and sends out an alert to the patient and care team should a recall take place. This allows the patient to seek immediate medical attention if needed, and allows the care team to remedy any potential problem that is taking place, along with meeting the expectations of the patient. This builds trust between the clinician and patient. Through TrackMy dashboards a clinician has the ability to view all devices per patient, and track notifications that have been sent out and followed up on. This helps reduce overall liability.

To request more information on TrackMy Implants FHIR integration and partner with us, the following steps can be followed –

- If an Epic Systems Client, review more information on TrackMy Implants at: <https://apporchard.epic.com/Gallery> and request additional information.
- For all other interested parties, please email us at – [info@trackmysolutions.us](mailto:info@trackmysolutions.us)

The TIME IS NOW, to continue to push a new standard of care through making healthcare data actionable! We want to work with YOU, please reach out to us.
